---

To Everyone,

We are working on some plans for the near future where Bruce and I will be able to personally communicate and interact with all of you. I for one can say I miss the lunches and providing everyone with WPI updates along with newsworthy events that we can share with all of you that makes our company so special.

I am very proud of the progress being made and the employee enthusiasm towards improving our safety culture. Keep up the great work supporting our safety programs, supporting each other, and demonstrating your dedication to safety.

I have a great view of the WPI South yard full of top-quality work produced by our engineers, fabricators and machinists that is very impressive. When people ask me how WPI and our employees are doing, I just point out at that yard and say, "Look for yourself and you will see the best darn fabrication provided by hard working Americans right here in Eugene, Oregon"

It has been tough not being able to spend time with our Ruston, LA folks, but I am very aware of the fact that they are equal to Eugene in their dedication to safety and contributing greatly to the success of WPI, and you all are a huge part of being the "Best of the Best".

It is a very proud moment for me when I talk to customers about our current safety record, our top-quality work, and the Best hard-working Americans a company can have! I DO like saying this.

Thank you for all you do.

Best Regards,  
Bob Marshall
